

Task of day3: here is some general python programs to understand the basics of functions of python.

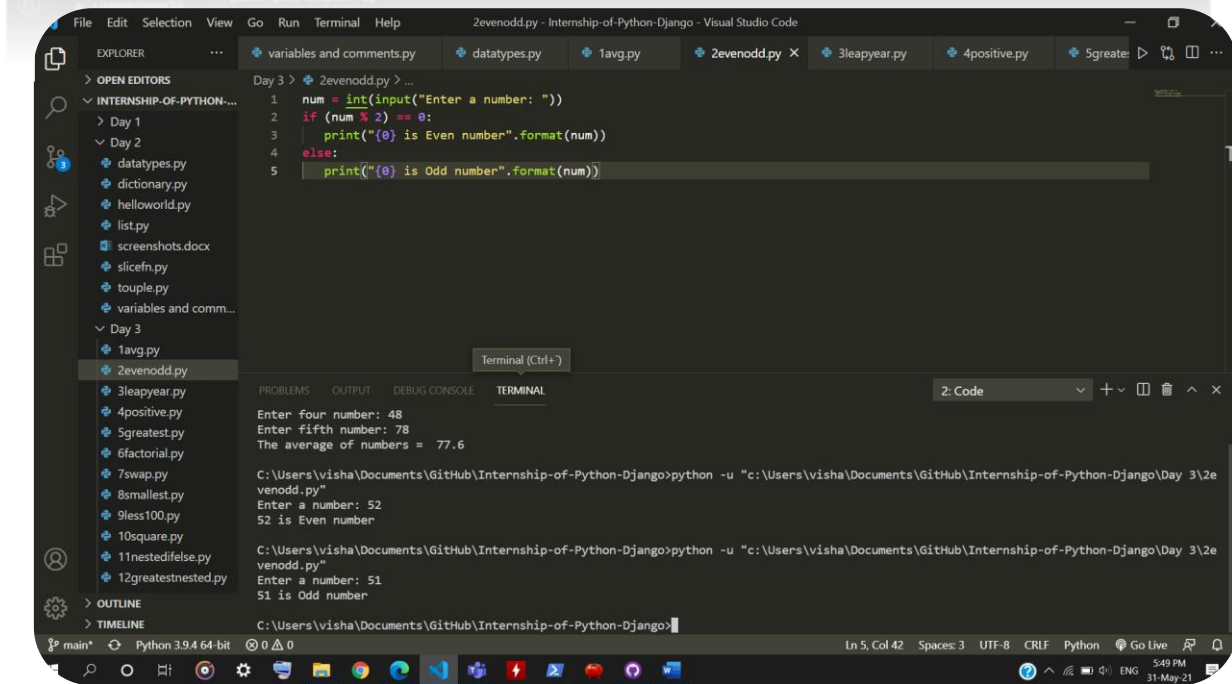

The screenshot shows the Visual Studio Code interface with the file explorer on the left, the code editor in the center, and the terminal at the bottom. The code editor displays a Python program named `1avg.py` that defines a function `avg_num` to calculate the average of five numbers. The terminal shows the output of the program, including the input values and the calculated average.

```
1 # Python program to find average of five numbers using function by vishal prajapati
2
3 def avg_num(num1, num2, num3, num4, num5): #user-defined function
4     avg = (num1 + num2 + num3 + num4 + num5) / 5 #calculate average
5     return avg #return value
6
7 # take inputs
8 num1 = float(input('Enter first number: '))
9 num2 = float(input('Enter second number: '))
10 num3 = float(input('Enter third number: '))
11 num4 = float(input('Enter fourth number: '))
12 num5 = float(input('Enter fifth number: '))
13
14 # function call
15 average = avg_num(num1, num2, num3, num4, num5)
16
```

Terminal Output:

```
1
value of x is 1
new value of x is 2
same values are Vishal Vishal
C:\Users\visha\Documents\GitHub\Internship-of-Python-Django>python -u "c:\Users\visha\Documents\GitHub\Internship-of-Python-Django\Day 3\1avg.py"
Enter first number: 88
Enter second number: 89
Enter third number: 85
Enter fourth number: 48
Enter fifth number: 78
The average of numbers = 77.6
```

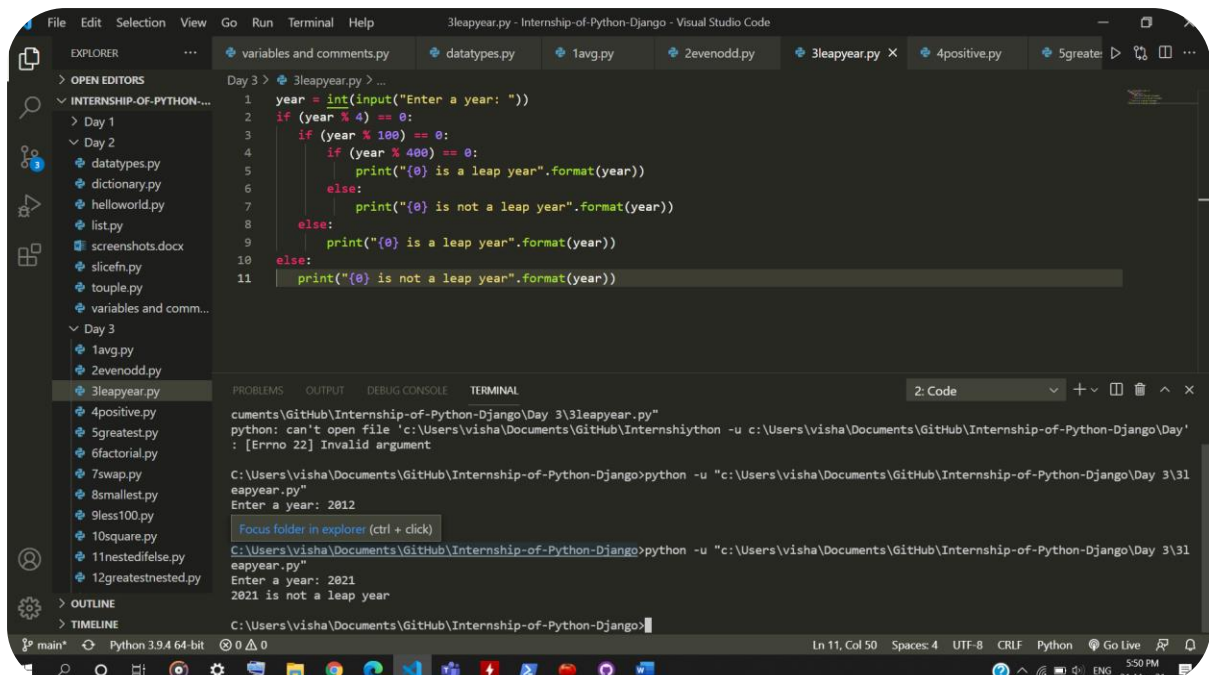

The screenshot shows the Visual Studio Code interface with the file explorer on the left, the code editor in the center, and the terminal at the bottom. The code editor displays a Python program named `2evenodd.py` that checks if a number is even or odd. The terminal shows the output of the program, including the input value and the result.

```
1 num = int(input("Enter a number: "))
2 if (num % 2) == 0:
3     print("{0} is Even number".format(num))
4 else:
5     print("{0} is Odd number".format(num))
```

Terminal Output:

```
Enter four number: 48
Enter fifth number: 78
The average of numbers = 77.6
C:\Users\visha\Documents\GitHub\Internship-of-Python-Django>python -u "c:\Users\visha\Documents\GitHub\Internship-of-Python-Django\Day 3\2evenodd.py"
Enter a number: 52
52 is Even number
C:\Users\visha\Documents\GitHub\Internship-of-Python-Django>python -u "c:\Users\visha\Documents\GitHub\Internship-of-Python-Django\Day 3\2evenodd.py"
Enter a number: 51
51 is Odd number
```

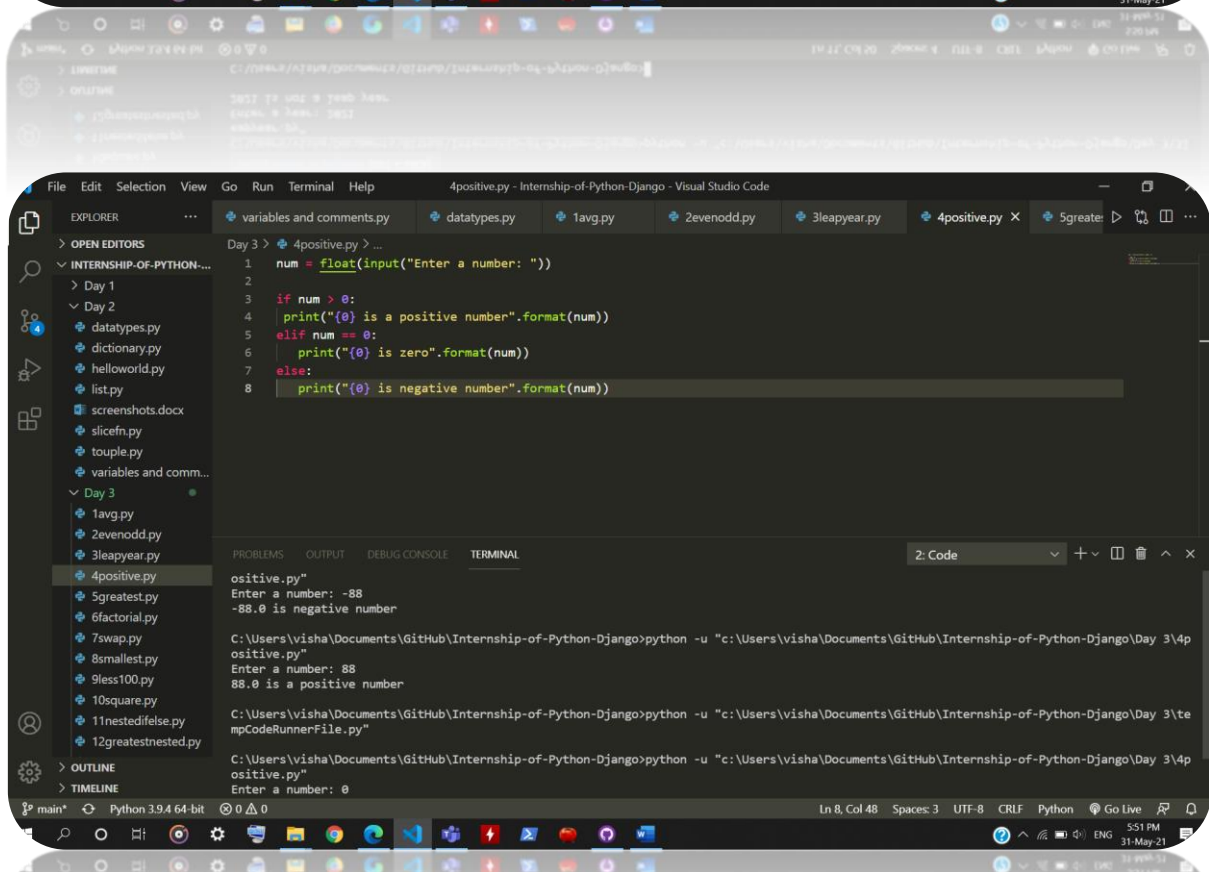

The screenshot shows the Visual Studio Code interface with a file explorer on the left listing various Python files. The main editor displays a file named `3leapyear.py` with the following code:

```
1 year = int(input("Enter a year: "))
2 if (year % 4) == 0:
3     if (year % 100) == 0:
4         if (year % 400) == 0:
5             print("{0} is a leap year".format(year))
6         else:
7             print("{0} is not a leap year".format(year))
8     else:
9         print("{0} is a leap year".format(year))
10 else:
11     print("{0} is not a leap year".format(year))
```

The terminal at the bottom shows the command `python -u "c:\Users\visha\Documents\GitHub\Internship-of-Python-Django\Day 3\3leapyear.py"` and the output:

```
Enter a year: 2812
2812 is not a leap year
```

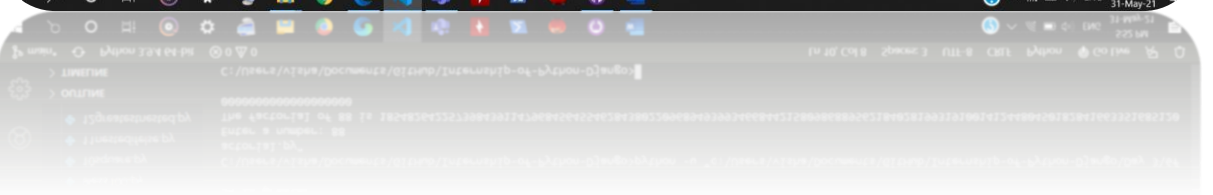

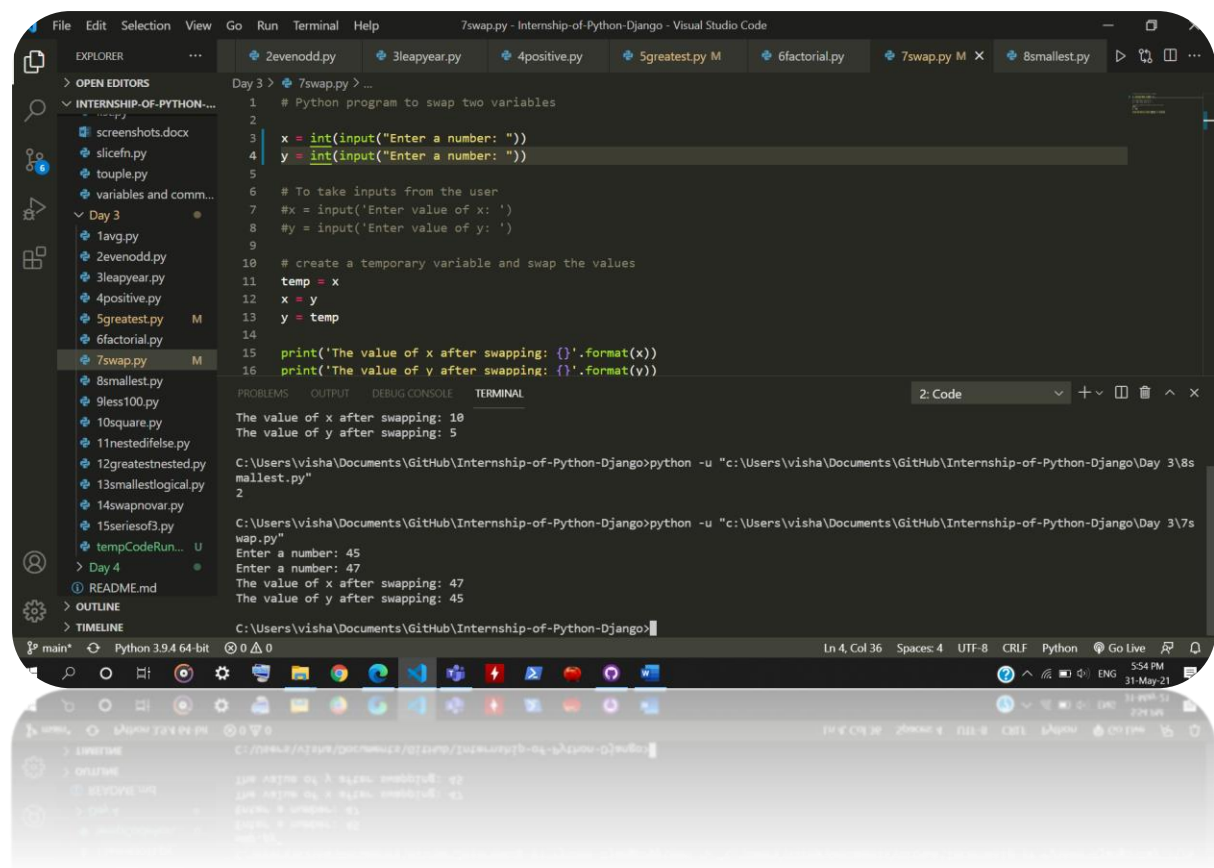

The screenshot shows the Visual Studio Code interface with a file explorer on the left. The main editor displays a file named `4positive.py` with the following code:

```
1 num = float(input("Enter a number: "))
2
3 if num > 0:
4     print("{0} is a positive number".format(num))
5 elif num == 0:
6     print("{0} is zero".format(num))
7 else:
8     print("{0} is negative number".format(num))
```

The terminal at the bottom shows the command `python -u "c:\Users\visha\Documents\GitHub\Internship-of-Python-Django\Day 3\4positive.py"` and the output:

```
Enter a number: -88
-88.0 is negative number
```

```
